

The safety of private e-scooter use in the UK E-scooter casualty data for the UK (2021)

This document records casualties from incidents in 2021 involving e-scooters, from across the UK, as gathered by PACTS. Due to under reporting or incorrect categorisation we know that this data is incomplete. We are also aware of near-misses and collisions from which no injuries are inflicted. We recognise that they can be distressing but have chosen not to include them as they will not be recorded by the Department of Transport who are carrying out the study into the rental schemes in the UK.

Data from the media (including social media) has been collected through proactive research of all major media platforms, including the use of three different monitoring systems to gain automatic updates.

Severity of injury is classified as defined in STATS 20 where each casualty is allocated into one of three possible categories. Where necessary we have made a judgement based on the information available. Therefore we are aware that it might not be the perfect categorisation as it is not official data:

- Fatal injury includes any cases where death occurs within 30 days as a result of a crash. It does not include death from natural causes or suicide.
- Serious injury includes (but is not limited to): fracture, internal injury, severe cuts, crushing, burns, concussion and fatalities occurring 30 or more days after the crash. Serious casualties are often (although not necessarily) detained in hospital for treatment.
- Slight injury includes (but is not limited to): sprains, whiplash, bruises, slight cuts and slight shock requiring roadside attention. Slight casualties can often (although not necessarily) be treated at the roadside.

Where multiple casualties were involved in one incident, this has been included. Where multiple sources have reported the same collision, details of each source have been listed

If you would like to access to this data in an editable format contact Margaret.Winchomb@pacts.org.uk
