

The safety of private e-scooter use in the UK  
E-scooter casualty data for the UK (2021)  
Version number: 20220504 Revision 12

This document records casualties from incidents in 2021 involving e-scooters, from across the UK, as gathered by PACTS. Due to under reporting or incorrect categorisation we know that this data is incomplete. We are also aware of near-misses and collisions from which no injuries are inflicted. We recognise that they can be distressing but have chosen not to include them as they will not be recorded by the Department of Transport who are carrying out the study into the rental schemes in the UK.

Data from the media (including social media) has been collected through proactive research of all major media platforms, including the use of three different monitoring systems to gain automatic updates.

Severity of injury is classified as defined in STATS 20 where each casualty is allocated into one of three possible categories. Where necessary we have made a judgement based on the information available. Therefore we are aware that it might not be the perfect categorization as it is not official data.  
- Fatal injury includes any cases where death occurs within 30 days as a result of a crash. It does not include death from natural causes or suicide.  
- Serious injury includes (but is not limited to): fracture, internal injury, severe cut, laceration, sprain or more days after the crash. Serious casualties are often (although not necessarily) detained in hospital for treatment.  
- Slight injury includes (but is not limited to): sprains, whiplash, bruises, slight cuts and slight shock requiring roadside attention. Slight casualties can often (although not necessarily) be treated at the roadside.

Where multiple sources were involved in one incident, this has been indicated. Where multiple sources have reported the same collision, details of each source have been listed if you would like to access to this data in an editable format contact Margaret.Wincomb@pacts.org.uk

Date of incident*	Location (region)	Location (city/town/borough)	Incident type	Gender of e-scooter rider	Age of e-scooter rider	E-scooter passengers	E-scooter Type	Casualty - road user type	Severity of injury	Severity Code	Location of injury	Type of injury	Type of injury	Gender of Casualty	Age of Casualty	Multiple Casualty incident	Initial source	Secondary source	Notes
